Abb. 4: Maßbild UE11-4DX mit Steckblockklemmen (mm)

¹⁾ Für detaillierte Informationen zur Sicherheitsauslegung Ihrer Maschine/Anlage setzen Sie sich bitte mit Ihrer zuständigen SICK-Niederlassung in Verbindung.

²⁾ Bei Überwachung des Rückmeldestrompfades Y1-Y2 (Schützkontrolle) durch ein entsprechendes Basisgerät, sonst wird SIL2/PL d nicht erreicht.

³⁾ Bei DC = 99 % und MTTF₀ = 100 a (gemäß EN ISO 13 849, Tab. K1 und Formel C.7) und 8760 Schaltspielen/a.

⁴⁾ Zum Erreichen der Überspannungskategorie III siehe Hinweis in Kapitel 5.

OPERATING INSTRUCTIONS

UE11-4DX

Safety relay expansion module

en

SICK AG • Erwin-Sick-Straße 1
D-79183 Waldkirch • www.sick.com
8009956/10CR/2018-08-02 • REIPA/XX
Printed in Germany (2018-08) • All rights reserved
Subject to change without notice

1 Scope

These operating instructions are only applicable to the UE11-4DX safety relay expansion modules with the following entry on the type label in the field *Operating Instructions: 8009956*.

You will find the device's date of manufacture on the type label in the field *Date Code* in the format *yywwxx* (*yy* = year, *ww* = calendar week, *xxx* = serial number). These operating instructions are original operating instructions.

2 On safety

This chapter deals with your own safety and the safety of the equipment operators.

➤ Please read this chapter carefully before working with the UE11-4DX or with the machine protected by the UE11-4DX.

2.1 Qualified safety personnel

The UE11-4DX expansion module must only be installed, commissioned and serviced by qualified safety personnel.

Qualified safety personnel are defined as persons who ...

- have undergone the appropriate technical training and
- have been instructed by the responsible machine operator in the operation of the machine and the current valid safety guidelines and
- have access to the operating instructions of the UE11-4DX expansion module and have read and familiarised themselves with them.

2.2 Applications of the device

The UE11-4DX expansion module can be used as per the safety level described in the technical data.

The actual performance level or SIL claim limit achieved depends on the external circuit, the design of the wiring, the selection of the control switch and its placement on the machine.

The UE11-4DX expansion module has been evaluated to UL 508.

The related actuators on the machine or system can be safely shut down using the expansion module's output signal switching contacts.

The UE11-4DX expansion module with delayed reactivation current paths is used to expand the enable current paths on basic devices with monitored input circuits, e.g. the UE43-2MF safety relay.

2.3 Correct use

The UE11-4DX expansion module must be used only as defined in section 2.2 "Applications of the device". It must be used only by qualified safety personnel and only on the machine where it has been installed and initialised by qualified safety personnel in accordance with the operating instructions. If the device is used for any other purposes or modified in any way – also during mounting and installation – any warranty claim against SICK AG shall become void.

2.4 General safety notes and protective measures

Pay attention to the safety notes and protective measures!

Please observe the following items in order to ensure the correct use of the UE11-4DX expansion module.

- During the mounting, installation and usage of the expansion module, observe the standards and directives applicable in your country.
- The national/international rules and regulations apply to the installation, commissioning, use and periodic technical inspection of the expansion module, in particular:
 - Machinery Directive
 - Work Equipment Directive
 - EMC directive
 - the work safety regulations and safety rules
- Manufacturers and operators of the machine on which a expansion module is used are responsible for obtaining and observing all applicable safety regulations and rules.
- The tests must be carried out by qualified safety personnel or specially qualified and authorised personnel and must be recorded and documented to ensure that the tests can be reproduced and retracted at any time by third parties.
- The operating instructions must be made available to the operator of the machine where the UE11-4DX is used.
- The machine operator is to be instructed in the use of the device by qualified safety personnel and must be instructed to read the operating instructions.

3 Product description

3.1 Structure and operating principle of the device

The input on the UE11-4DX expansion module is prepared for the connection of UE10-series safety relays. The connection of the supply voltage to input A1-A2 via the enable current path on an upstream basic device results in the delayed de-energisation of the relay.

The enable current paths on the UE11-4DX are designed as safe outputs. The signalling current paths and the feedback current path are not safe outputs.

3.2 Device functions

Opening of the enable current path on the basic device results in the delayed opening of the enable current paths on the UE11-4DX. It has the following reactivation delays (type dependent): 0.5 s, 1 s, 2 s, 3 s. With the combination of UE11-4DX and a UE basic device, stop category 1 (EN 60 204-1) can be realised. The feedback current path (N/C contact) Y1-Y2 is used as external device monitoring for the monitoring by the basic device.

In order to attain SIL2/PL d, connect the external device monitoring!

In order to reach SIL2/PL d, an external diagnosis with DC 60 ... 90 % must be applied (i.e. the external device monitoring must be connected).

Please also read the notes in chapter 12 "Application example".

3.3 Status indicators

Display	Meaning
K1 ● Green	Relay K1 active
K2 ● Green	Relay K2 active

4 Mounting

Mounting only with enclosure rating IP54 or better!

The expansion module is only allowed to be mounted in the control cabinet. The control cabinet must at least comply with enclosure rating IP54.

➤ Mounting in accordance with EN 50 274.

➤ The modules are located in a 22.5 mm wide modular system for 35 mm mounting rails as per EN 60 715.

5 Electrical installation

Note:

All external switching elements and their wiring must withstand an ampacity, maximal short-circuit load of $I_{max} = 1000 \text{ A}$ (according to EN 60 947-5-1).

Switch the entire machine/system off line!

- The voltage supply must satisfy the regulations for extra-low voltages with safe isolation (SELV, PELV) for overvoltage category II as per EN 60 664 and EN 50 178.

Note:

For installation in environments of overvoltage category III, external protection elements must be used.

- All connections, wiring and cable runs must comply with the required category as per EN ISO 13 849 and EN 62 061 (e.g. cables laid with protection, individually sheathed cable with screen etc.).
- To protect the contact outputs on the UE11-4DX and to increase the service life, the loads connected must be equipped with, e.g., varistors and RC circuits. Please also note that the selection of the arc suppression can increase the total response time of the safety function. For installation in environments of overvoltage category III, external protection elements must be used.
- The output signal switching devices and the external device monitoring (EDM) must be wired in the control cabinet.
- To prevent the welding of the contacts on the built-in relay, an overcurrent protection device with max. 6 A short-circuit protection (duty class gG) is to be integrated into the enable current paths (see Fig. 2, fuse F3/F4/F5/F6).

5.1 Pin assignments

Terminal	Description
A1	Voltage supply (+24 V DC)
A2	Voltage supply (0 V DC)
Y1-Y2	Feedback current path (for usage as external device monitoring)
17-18	Enable current path 1, delayed reactivation
27-28	Enable current path 2, delayed reactivation
37-38	Enable current path 3, delayed reactivation
47-48	Enable current path 4, delayed reactivation
55-56	Signalling current path (not safe), delayed reactivation
65-66	Signalling current path 2 (not safe), delayed reactivation

8 Disposal

Always dispose of serviceable devices in compliance with local/national rules and regulations with respect to waste disposal.

9 Ordering information

All devices operate with 24 V DC

Delay time	Part number (type code)
With screw type terminals	

0.5 s	6024921 (UE11-4DXD30.5)
1 s	6024922 (UE11-4DXD31)
2 s	6024923 (UE11-4DXD32)
3 s	6024924 (UE11-4DXD33)

With removable terminals

0.5 s	6024925 (UE11-4DXD30.5)
1 s	6024926 (UE11-4DXD31)
2 s	6024927 (UE11-4DXD32)
3 s	6024928 (UE11-4DXD33)

10 Compliance with EU directives

UE11-4DX, Safety relays
SICK AG, Erwin-Sick-Straße 1, D-79183 Waldkirch
You can call up the EU declaration of conformity and the current operating instructions by entering the part number in the search field at www.sick.com (part number: see the type label entry in the "Ident. no." field). Direct link to EU declaration of conformity: www.sick.com/9070041

- The undersigned, representing the manufacturer, hereby declares that the product is in conformity with the provisions of the following EU directive(s) (including all applicable amendments), and that the standards and/or technical specifications stated in the EU declaration of conformity have been used as a basis for this.
- MACHINERY DIRECTIVE 2006/42/EC
 - EMC DIRECTIVE 2014/30/EU
 - ROHS DIRECTIVE 2011/65/EU

For UL 508 and CSA applications			
Input voltage (A1, A2)		24 V DC	
Output current circuits > 25 V AC/60 V DC	PELV at A1/A2		
Output current circuits ≤ 25 V AC/60 V DC	SELV or PELV on A1/A2		
Power consumption DC operation	1 W		
Residual ripple with DC operation (within the limits of V _S)			2.4 V _S
Reset time		75 ms	
Reactivation delay (depending on type)	0.5, 1, 2 or 3 s (+/- 35 %)		
Minimum switch-on time	75 ms		
Output current circuits (17/18, 27/28, 37/38, 47/48, 55/56, 65/66, Y1/Y2)			
Contact material and surface finish	Ag alloy; gold plated		
Enable current paths (normally open contact), safety relevant	4		
Signalling current paths (normally closed contact), not safety-relevant	2		
Feedback current paths (normally closed contacts), not safety relevant	1		
Contact type	Positively guided		
Max. contact load, enable current paths			
Switching voltage AC	10 V		230 V
Switching voltage DC	10 V		300 V
Switching current	10 mA		6 A
Max. contact load, signalling current paths			
Switching voltage AC	10 V		230 V
Switching voltage DC	10 V		300 V
Switching current	10 mA		2 A
Max. contact load, feedback current path			
Switching voltage DC	10 V		24 V
Switching current	10 mA		100 mA
Total current I _{sum}			12 A

	Minimum	Typical	Maximum
For UL 508 and CSA applications			
Switching voltage AC (per contact)			230 V AC
Switching current AC			6 A
Switching voltage DC (resistive load)			24 V DC
Switching current DC			6 A
Total current I _{sum}			12 A
Max. contact load in accordance with NEMA	C300		
Usage category (EN 60 947-5-1)	AC-15 Ue 230 V AC, le 3 A (3600 switching operations/h) DC-13 Ue 24 V DC, le 4 A (360 switching operations/h) DC-13 Ue 24 V DC, le 2.5 A (3600 switching operations/h)		
Contact fuse protection operating class gG		6A	
Permissible switching frequency	3600/h		
Service life, mechanical	10 ⁷ switching operations		
Operating data			
Protection against physical contact (EN 60 664-1, EN 60 947-1)			
Rated impulse voltage V _{imp} (EN 60 664-1)	4 kV		
Overvoltage category	II ⁴⁾		
Rated voltage	300 V AC		
Test voltage U _{ms} 50 Hz	2 kV		
Enclosure rating			
Housing	IP40 (EN 60 529)		
Terminals	IP20 (EN 60 529)		
Radiated emissions	EN 61 000-6-4		
Interference resistance	EN 61 000-6-2		
Mounting	Mounting rail (EN 60 715)		
Ambient operating temperature	-25 °C		+55 °C
Storage temperature	-25 °C		+75 °C
Wire cross-sections			
Single wire (1×)	0.14 mm ²		2.5 mm ²
Single wire (2×, same cross-section)	0.14 mm ²		0.75 mm ²
Fine stranded wire with ferrules (1×)	0.25 mm ²		2.5 mm ²
Fine stranded wire with ferrules (2×, same cross-section)	0.2 mm ²		0.5 mm ²
Allowed tightening torque		0.5 Nm	0.6 Nm
For UL 508 and CSA applications			
Connection cross-section	AWG 26-14 (only use 60/75 °C copper flexible wire)		
Tightening torque	5-7 lb-in		
Weight		200 g
