More information on the maritime industry: [www.sick.com/maritime](http://www.sick.com/maritime)
The International Maritime Organization (IMO) has established regulations for the reduction of ship emissions. SICK analyzers successfully monitor flue gas scrubbers which remove, for example, SO$_2$ from marine diesel engine exhaust gases. SICK analyzer systems also measure other components such as CO, NO, NO$_2$, CO$_2$, H$_2$O, NH$_3$, O$_2$ and CH$_4$ in exhaust gas from gas turbines and boilers before and after catalysts or gas scrubbers. SICK also offers solutions to measure the volume flow of gases, such as exhaust gases, and natural gas as a fuel. This may be during cargo loading and unloading, as well as to determine the amount of fuel injected into an engine. When loading bulk materials, SICK sensors also monitor loading quantities, and prevent collisions between cranes.

**Emission monitoring**
The regulatory requirements for emission monitoring are becoming more stringent worldwide. SICK analyzers and system solutions monitor and check emission limit values, contaminant emissions and the release of other substances into the environment.

**Flue gas treatment**
Scrubbers, catalytic reactors and particulate filters all remove gaseous pollutants from the flue gas. Gas analyzers provide real-time measurement to optimize removal efficiency. This optimization leads to significant savings of operating costs and less maintenance for ship operators.
Measuring
Monitoring material flow on, from and to the ship optimizes throughput, reduces loading time and saves maintenance time. SICK has a wide variety of sensors and sensor systems for precise and direct measurement of volume and mass flow.

Service
Competent consulting, qualified planning support, detailed project planning and engineering, installation and start-up – SICK provides all of these services by its own personnel. SICK also provides service support for equipment.
APPLICATIONS IN FOCUS
Applications in focus

① Fuel supply 8
② Monitoring the efficiency and separation efficiency of the DeNOx system 10
③ Wet flue gas desulfurization system 12
④ Continuous emission monitoring system 14
⑤ Loading and unloading Ships 16
Focus 1: Fuel supply

1. Steam flow measurement for crude oil and heavy oil
Crude oil and heavy oil must be heated, using, for example, hot steam, before it can be pumped. This steam is either generated by the ship’s boiler, or provided by service providers in the port when loading or unloading cargo. In order to ensure that sufficient steam is fed in and distributed, precise measurements are also required in Ex areas. Moreover, the ability to measure steam flow accurately is relevant for determining the amount of steam supplied.

2. Refueling ships with natural gas
Recording the volume of natural gas used in refueling the ship provides the information required to settle with the gas provider. The measurement accuracy and reliability of the measurement system are of vital importance in this respect. The ultrasonic gas flow measuring device FLOWSIC600 Quatro combines two high-precision gas flow meters with four measurement paths in one housing. The FLOWSIC600 Quatro recognizes faults before they have a chance to affect the results of the measurement. The ultrasonic gas flow measuring device has a compact, rugged housing and works without issues, requiring no maintenance.

3. Flare gas measurement
Gas flares primarily serve to burn combustible exhaust gas, which may escape through pressure relief valves during unplanned system operations. Gas flares are also used to burn gases for short periods during the commissioning and decommissioning of systems or system parts. The FLOWSIC100 Flare measures the gas flow in order to control the optimum mixture ratio of $O_2$, steam and flare gas in the flare.
Focus 1: Fuel supply

4 Measuring gas consumption in engines
Measuring the consumption of natural gas at the engine inlet provides the information required to properly inject gas into the engines, calculate the efficiency of the individual engines and to optimize gas consumption. The measurement accuracy and reliability of the measurement system are of vital importance in this respect. The new ultrasonic gas flow measuring device, FLOWSIC500, from SICK facilitates the high-precision measurement of natural gas distribution to the individual engine cylinders. The FLOWSIC500 does not feature any mechanically operated parts, and is therefore particularly reliable and requires little maintenance; significantly reducing operating costs.

5 Measuring the admission of liquid fuel to engines
Each kWh of engine drive power requires around 200 g of diesel. This equates to around three tons of fuel per hour for an engine with 15 MW drive power. The ATM60 absolute encoder can precisely detect the aperture angle of the engine’s inlet valve for fuel. The payback for this investment is just a few days.
Focus 2: Monitoring the efficiency and separation efficiency of the DeNO\textsubscript{x} system

1 \textbf{Recirculation air in the turbocharger}
In order to ensure that less NO\textsubscript{x} is formed in an engine, the oxygen content in the compressed airflow of the turbocharger has to be measured and controlled. The TDLS laser oxygen transmitter TRANSIC100LP facilitates real-time measurements, providing direct feedback for controlling the volume of fresh air. The analyzer is easy to install and operate. Test gas or flushing with nitrogen is not required, which reduces operating costs to a minimum. The heated optics prevent the formation of condensation, and the integrated drift monitor enables the TDLS laser oxygen transmitter to obtain stable measured values.

2 \textbf{Gas analysis prior to selective catalytic denitrification for process optimization}
Selective catalytic reduction (SCR) is used to reduce NO\textsubscript{x}. This adds a reagent such as ammonia (NH\textsubscript{3}), which uses a catalyst to turn nitrogen oxide into water and nitrogen at around 400 °C. The concentrations of nitrogen oxide are measured at the inlet, and are included in the calculation of cleaning performance. The concentration of H\textsubscript{2}O and O\textsubscript{2} is measured for standardization purposes.

The analyzer solution, MARSIC300, is used here. The flexibility of the MARSIC300 makes it possible to monitor the efficiency of the engines and the catalytic converters. This is enabled by the HOTSAMPLER421 measuring point switchover feature with up to eight measuring points.
Focus 2: Monitoring the efficiency and separation efficiency of the DeNO\textsubscript{x} system

Environmental protection regulations stipulate that the concentration of NO\textsubscript{x} must be reduced before it is released into the atmosphere. NO\textsubscript{x} and NH\textsubscript{3} are measured at the catalyst outlet: The concentration of NH\textsubscript{3} (ammonia slip) is important to the control of NH\textsubscript{3} injection. Excess ammonia reacts with sulfur compounds, forming salts which may block components in the downstream area of the selective catalytic reduction process.

The NO\textsubscript{x} value determines the efficiency. The analyzer solution, MARSIC300, is particularly suitable for this measuring task, as it has been specifically designed for the exhaust gases from marine engines. The flexibility of the MARSIC300 makes it possible to monitor the efficiency of the engines and the catalytic converters. This is enabled by the HOT SAMPLER421 measuring point switchover feature with up to eight measuring points.
Gas analysis at the inlet of the wet flue gas desulfurization system

The precise measurement of SO₂, CO₂ and water in extremely humid conditions in the flue gas makes it possible to regulate the gas scrubber accurately. The performance data pertaining to the flue gas cleaning process is verified using a reliable, tested measuring technique. The results of the data enable the development and use of smaller flue gas scrubbers. This enables new projects to be carried out more accurately, as well as more cost effectively.

This is very economical and good for the environment, as CO₂ emissions decrease.
Gas analysis at the outlet of the wet flue gas desulfurization system

The reliable, extractive, multi-component analyzer system is able to analyze additional relevant gas components in exhaust gas, depending on the engine. In sea areas where nitrogen oxide has to be measured (NECAs), nitrogen oxide is analyzed along with SO₂ and CO₂ simultaneously. The efficiency of the engine can be monitored online in order to optimize engines when changing fuel (e.g., from heavy oil to diesel).

Shorter changeover phases, such as when arriving in sea areas where emissions have to be monitored (ECAs), result in reduced changeover times, avoid engine damage, and save fuel.
**Focus 4: Continuous emission monitoring system**

1. **Monitoring of gas emissions on ships**
   Environmental regulations stipulate that certain harmful substances and reference values must be continuously observed. Regulations on emission monitoring vary from country to country. Measurement technology must be assessed with regards to its suitability in many countries – in accordance with the requirements of EN15267-3 in Europe, for example, or the EPA standards in the USA. SICK’s wide range of products in the emission monitoring field ensures that it offers complete solutions. The analyzer solution MARSIC300, developed specifically for ships, facilitates the measurement of NO, NO₂, SO₂, CO₂, H₂O, CO, CH₄, and O₂. MARSIC is type approved from DNV GL, ABS, CCS, NK and KR according to MARPOL Annex VI and class rules and requirements.

2. **Monitoring of dust emissions on ships**
   The International Maritime Organization (IMO) does not require dust and soot emissions on ships to be measured. Ships traveling through Arctic waters, however, must monitor the soot that they emit. The emission of soot leaves a black layer of soot on the white ice, making the ice melt more quickly when the sun shines. Monitoring soot emissions can serve to control and optimize the engine, particularly when changing to various fuels. This saves fuel and prevents engine damage.

3. **Recording of mass emissions on ships**
   Continuous flow measurement in accordance with the technical standard NTC 2008 determines the mass flow of nitrogen oxides in gNOₓ/kWh. This can be measured easily and directly using the FLOWSIC100 from SICK. The non-contact flow measurement can be operated reliably at temperatures of up to 450 °C.

The waste gas volume flow is recorded accurately, independent of the fuel and operation of the engines, boilers and gas scrubbers on board. Direct and reliable measurements facilitate the optimum operation of engines, boilers, and gas scrubbers.
Recording and analysis of emissions data for ships

A data acquisition system, such as the MEAC, is ideal for recording, saving, analyzing, displaying, and exporting continuous emission data. This system has been approved by the classification society DNV GL as a touch panel PC in the ‘at sea variant,’ which has been specifically designed for ships. Reports are tailored to Annex IV of the MARPOL Convention.

The MEAC provides data evaluation that takes into account emission and ship data, such as current position and performance. The emission reports can be downloaded in a readable file format. Established data transmission protocols – Modbus and OPC – are available to digitally record ship data. Emission devices with measuring point switching can also be connected.
Focus 5: Loading and unloading Ships

1. **Volume measurement for the loading and unloading of ships**

Efficient loading processes on belts, stockpiles, ship loaders and silos require the precise measurement of the material flow in order to keep downtime to a minimum, and maximize control. It is very important to minimize loading problems when controlling the material flow to the port of loading. In the form of the Bulkscan® LMS511, SICK provides a comprehensive solution for these requirements, which is especially suitable if conventional scales or load cells are exposed to mechanical wear.

2. **Protection of ship loaders**

Numerous areas on ships and in ports have to be monitored for ships to be loaded and unloaded safely. For example, loading hatches, superstructures, booms, and mobile machinery constitute potential hazardous areas. SICK solutions minimize the risk of collision, and maximize productivity.

3. **Inerting of tanks and cargo holds on ships**

When refueling and loading ships with fuel or chemicals, gases that should not be emitted may escape. To minimize risks to the environment and the danger of explosion, TRANSIC100LP measures the content of atmospheric oxygen. SICK’s solution is based on a redundant oxygen measurement system with two transmitters. The TRANSIC100LP is positioned on land in front of the purge air unit, which takes in and diverts the air displaced from the tank or cargo hold. If the level of atmospheric oxygen in the piping is too high, it is displaced by adding inert gas, which prevents the creation of an explosive atmosphere.
Focus 5: Loading and unloading Ships
CONCEPT FOR MARITIME SERVICES

Concept for the provision of maritime services to support the MARSIC ship emissions measuring device over its entire life cycle. Benefit from our global strength.

Site survey
Inspection of the conditions on board and recommendation of a suitable installation location
• Clarification of relevant installation-related issues
• Customer-specific configuration of the MARSIC according to the applications and ambient conditions

Individualized electrical drawings
The performance package includes:
• Customer-specific title block
• Configuration of the number of measuring points based on requirements

Factory acceptance test (FAT)
Demonstration of the assembled, installed and commissioned measurement system in the production plant for customer acceptance purposes, including
• Visual inspection of all system components
• Assembly and instruction on use of the system
• Verification of measurement components and measuring ranges
• Validation of the calibration using test gases
• Validation of the calibration using internal calibration filters
• Verification of correct measurement operation
• Measuring point switchover (for two or more measuring points)

Supervision of installation
• Support during planning and supervision of installation on board
• Verification that the installation was performed correctly
• Verification that the system is ready for commissioning

Commissioning
• Commissioning including functional testing of individual components and the overall system
• Verification of signal transmission to the customer’s system
• Review of project documentation for completeness and correctness. Amendment of the documentation, if necessary
• On-site instruction of the customer’s staff

Support during class acceptance
• Demonstration of system functionality in the presence of the classification society
• Demonstration of signal transmission to the customer’s systems
• Assistance of the customer with any queries from the classification society
Annual maintenance
Annual check of the complete system:
- Visual inspection
- Parameters check
- Maintenance work, as required, and replacement of wear and tear parts
- $\text{H}_2\text{O}$ cross-sensitivity check
On request:
- Calibration using test gases (recommended) – test gases provided separately
- Adjustment of the $\text{H}_2\text{O}$ linearization tables (recommended)

Remote support → www.sick.com/sick_remote_service
- Remote maintenance connection to the analyzer via a LAN or mobile connection for high availability
- Reactive and proactive remote diagnosis by experts
- Qualified support with no travel or setup times for improved response time
- Secure Internet connection using strong encryption and access control by the customer
- The remote service platform can also be utilized by the customer
- System-specific documentation is available at all times

Provision of the calibration gas
- Provision of calibration gases in accordance with the MARPOL requirements for DeSOx and DeNOx applications
- Includes all accessories (pressure reducer, fittings, hoses)
- Supplied in a handy case for mobile use and easy transport even in confined spaces
Suitable for:
- Class acceptance
- Calibration of the measuring components

24-h hotline → www.sick.com/24-h-helpdesk
- Around-the-clock telephone support (five, six or seven days per week)
- Trained staff to provide support during troubleshooting and when replacing components
- Optional remote maintenance support

Individualized service contracts according to requirements
- Modular service concept with individually selectable services tailored to customer requirements
HOTSAMPLER421: MEASURING POINT SWITCHOVER – MARSIC300

HOTSAMPLER421 tasks

The HOTSAMPLER421 serves to extend the measuring point switchover of the ship emission measurement device from 2 to maximum 8 measuring points. The sample gas is extracted at three measuring points and fed through the analysis system (extractive measurement). Up to two HOTSAMPLER421 can be switched between the gas sampling probes and MARSIC300. It is possible to connect up to maximum four gas sampling probes to the HOTSAMPLER421. Using the HOTSAMPLERS421 depends on application and regulation.
MARSIC300 system, with gas sampling probes and two HOTSAMPLER421

1 Gas sampling probes
2 HOTSAMPLER421
3 MARSIC300
Baggage handling tasks

Sensors support the transport of baggage from the bag drop to the baggage reclaim area. Today’s baggage handling systems in cruise terminals are required to manage a very large volume of luggage and shorter transfer times with as little manual labor as possible. This is where SICK steps in with everything from sensors all the way to complete sensor solutions for cruise terminal applications. SICK will work with you to create a solution for your specific task. We are your consultant for developing and delivering the sensor solutions you need for your project. SICK also supports you during the installation and commissioning stages and provides after-sales support. SICK is your competent partner during each phase of your project.
Automatic bag drop-off station

SICK offers a suitable sensor solution for every task at automated bag drop-off stations. The tasks are varied: reading boarding passes, identifying baggage labels (using laser, camera or RFID technology), detecting oversized baggage and determining the volume and weight of baggage. Other tasks include taking photos of the bags and classifying them based on conveyability. Intrusion detection prevents people from tampering with bags or accessing the baggage handling system without authorization. SICK safety sensors protect passengers from dangerous machine movements.
Identification

ALIS – laser scanner system
Automatic reading of baggage labels using a bar code laser scanner system for baggage handling systems and a global service network.

- SMART code reconstruction
- Environmentally friendly thanks to lower energy consumption
- Easy installation
- Optional 100% redundant system design
- Option of upgrading existing bar code systems with cameras

ALIS CAM– camera system
The camera-based identification system for highest reading performance even when bar codes are damaged and dirty.

- Matrix and line cameras ensure the highest image quality
- Extended options for video coding and optical character recognition
- One interface for communication with the host
- Significant reduction in manual post-processing
- An increased sorting rate and optimization of transfer times

ALIS – RFID system
SICK is the innovation leader in the field of RFID in automated scanning systems for baggage handling systems.

- Unambiguous assignment of the label to the bag
- Highest read rate thanks to UHF technology developed by SICK with the option of 100% redundant system design
- Use of standard components
ALIS – RFID system / laser scanner

Many years of experience in the field of bar code scanning combined with RFID technology for baggage handling technology ensure maximum reliability in baggage identification.

- Just a single host interface
- Both technologies developed by SICK
- 100% read rate
- Option of upgrading a bar code system with RFID

ALIS DIM

ALIS DIM protects baggage handling system components, such as x-ray devices, from oversized bags and optimizes the automated flight make-up by measuring the bags.

- Dimension
- Volume
- Position
- Orientation

Integration into other ALIS systems possible
CLOSE SAFETY GAPS BEFORE THEY ARISE!

When it comes to protecting public buildings, industrial property, or private houses, structural measures or protection using security guards often have their limitations. SICK electronic protective devices for stationary, portable, or mobile applications are therefore a useful addition. Among others, reliable people-counting and access systems are indispensable for optimizing business processes and complying with security rules. Person detection is also relevant in the framework of building control and automation and for securing logistical processes. For these applications, SICK offers professional consultation and the necessary planning support in addition to the appropriate sensor solutions.

Horizontal monitoring of open spaces in front of buildings

2D-LiDAR sensors monitor open spaces connected to a property horizontally. Multiple monitoring fields and selective field evaluation can be freely defined. This makes it possible to block out certain access routes and paths and to monitor anyone entering.

Vertical protection of a fence

A LiDAR sensor generates a vertical field on a single fence. In doing so, the sensor quickly detects whether a person has violated this field by crawling beneath or climbing over, regardless of the weather conditions, and puts out an alarm.
Tasks and uses: 2D-LiDAR sensors

- make undetected intrusion into an area difficult
- detect events at the perimeter of an area
- protect fences and forecourts
- secure and monitor access points
- protect from undercutting with horizontal and diagonal setup
- monitor large areas
- protect from manipulation using surrounding contours as a reference
- are not influenced by illumination or unfavorable weather conditions
- can blank fixed obstacles or small objects

Benefits

Perimeter protection via sensors starts at the barrier encircling the premises and ends at the building envelope. In order to keep the entire area secure, software inside the sensor evaluates all pre-defined monitoring fields. If one of these monitoring fields is violated, an alarm goes off. The position data of persons in this field can be easily determined using the measurement data from the sensor.

At the same time, the multi-echo technology and the possibility of blanking defined objects such as small animals decrease the number of false alarms. This results in reliable object detection regardless of the ambient conditions. This protects personal rights, as the sensor only detects the field violation and does not take personal photos.

TRANSIC100LP – At a glance

- O₂ transmitter based on high-performance laser spectroscopy (TDLS)
- For use in potentially explosive atmospheres (FM, ATEX and IECEx approvals)
- Measurement directly in-situ or extractive using a sample gas cell (option)

Your benefits

- Measures in real-time directly in the process
- Easy installation and operation
- Self-diagnostics with maintenance display
- Low requirements for gas conditioning

DUSTHUNTER T50 – At a glance

- For medium to high dust concentrations
- Automatic check of zero and reference point

Your benefits

- Easy installation, commissioning and operation
- Measurement independent of gas velocity, humidity and particle charge

- Designed for heavy-duty industrial applications
- Compact design and easy to operate
- Long-term stability
- No moving parts

- Low operating costs: no consumables and no purging gas consumption
- Rugged: reliable measurement even in contaminated gases

For more information, just enter the link or scan the QR code and get direct access to technical data, CAD design models, operating instructions, software, application examples and much more.
**DUSTHUNTER T100 – At a glance**

- For medium to high dust concentrations
- Integrated contamination check
- Automatic check of zero and reference point

**Your benefits**

- Easy installation, commissioning and operation
- Measurement independent of gas velocity, humidity and particle charge

**DUSTHUNTER T200 – At a glance**

- For medium to high dust concentrations
- For small to large measuring distances

- For small to large measuring distances

- For small to large measuring distances

**Your benefits**

- Low maintenance due to self-monitoring
- Approved according to EN 15267

*www.mysick.com/en/DUSTHUNTER_T100*

For more information, just enter the link or scan the QR code and get direct access to technical data, CAD design models, operating instructions, software, application examples and much more.
MARSIC – At a glance
- Rugged design and high level of measurement accuracy
- Up to four measurement points with one analyzer
- DNV GL type approval in accordance with MARPOL Annex VI, NOx Technical Code 2008 and MEPC.184 (59)

Your benefits
- Low costs due to minimal maintenance requirements
- Several measurement points with just one analyzer
- High levels of availability and reliability
- Assemblies that are easy to replace during servicing

MEAC – At a glance
- Evaluation according to EU directives 2000/76/EC and 2001/80/EC
- Evaluation according to 13., 17., 27. and 30. FICA and TA-Luft (Technical Instructions on Air Quality Control)
- Inclusion of operational parameters and plant conditions

Your benefits
- Software monitors all communications with connected field devices and control systems
- All values are stored on hard disk, thus it is possible to look at data history even after many years

→ www.mysick.com/en/MARSIC
For more information, just enter the link or scan the QR code and get direct access to technical data, CAD design models, operating instructions, software, application examples and much more.

VOLUME FLOW MEASURING DEVICES  FLOWSIC100
MASS FLOW MEASURING DEVICES  FLOWSIC100 Flare

FLOWSIC100 – At a glance

- Rugged titanium transducers for high durability
- Corrosion-resistant material for application in aggressive gases (option)
- Integral measurement over the duct diameter with types H, M and S
- Probe type PR for economic installation from one side of the duct
- Automatic function control with zero and span point check

Your benefits

- Reliable flow measurement for ducts with small up to very large diameters
- High durability of the device
- Minimum operating and maintenance costs
- Accurate measuring results under difficult measuring conditions
- Measurement without pressure loss, therefore no influences on the process

www.mysick.com/en/FLOWSIC100

For more information, just enter the link or scan the QR code and get direct access to technical data, CAD design models, operating instructions, software, application examples and much more.

FLOWSIC100 Flare – At a glance

- Highest measurement resolution and short response time
- Innovative sensor design for very high gas velocities
- Optimal signal transmission also at atmospheric pressure
- Remote installation of control unit up to 1,000 m away
- Single and multipath meter configuration
- Field repeatable check procedure of factory zero flow test
- Check cycle for automatic self-diagnosis / signal optimization

Your benefits

- Reliable process control by accurate measurement near to zero flow readings
- High measurement availability also under emergency plant operation conditions with high gas velocities up to 120 m/s
- Cost saving by remote installation of control unit in safe area
- System solution to serve three different flare measurements with a single control unit
- Cost saving by minimized installation using single probe version FLOWSIC100 EX-PR
- Securing optimal meter performance by continuous monitoring of meter function and extended field diagnostic capabilities

www.mysick.com/en/FLOWSIC100_Flare

For more information, just enter the link or scan the QR code and get direct access to technical data, CAD design models, operating instructions, software, application examples and much more.
FLOWSIC100 Process – At a glance

- Corrosion-resistant transducers made of stainless steel or titanium
- Process pressure up to 16 bar
- Explosion-proof version for applications in Zone 2 (ATEX) available
- Hermetically sealed ultrasonic transducers
- Measurement without pressure loss, therefore no influences on the process
- Automatic function control with zero and span point check

Your benefits

- Reliable and accurate measurement also at low gas velocities
- No movable parts, therefore low maintenance
- Measurement independent of pressure, temperature and gas composition
- No influence on the gas flow due to contact-free measurement
- Approved for usage in hazardous areas Zone 2 (ATEX)
- User-friendly operation and device diagnosis via MCU control unit and SOPAS ET operating software

For more information, just enter the link or scan the QR code and get direct access to technical data, CAD design models, operating instructions, software, application examples and much more.

FLOWSIC500 – At a glance

- Cutting-edge technology: ultrasound
- Diagnostics and permanent operational check
- Durable and reliable without moving parts
- Replacable cartridge
- Straight inlet/outlet piping not required
- Overload-proof
- Optional integrated volume correction/data registration
- Battery or intrinsically safe power supply

Your benefits

- Ultimate measurement certainty and safety of continuous gas supply
- Reduction of installation costs due to integrated volume correction
- Simple installation, compatible with conventional technologies (turbine and rotary displacement meters)
- Minimal operating costs due to being nearly maintenance-free
- Easy recalibration due to straightforward cartridge replacement
- Reliable under dynamic load changes
- Self-sufficient operation

For more information, just enter the link or scan the QR code and get direct access to technical data, CAD design models, operating instructions, software, application examples and much more.
**FLOWSIC600 – At a glance**

- High efficient ultrasonic transducers
- Direct path layout
- Intelligent self-diagnostics
- Compact, robust design

**Your benefits**

- Long-term stability, reliable measurement
- Low maintenance due to intelligent self-diagnostics
- Virtually immune to pressure regulator noise

**ATM60 DeviceNet – At a glance**

- Extremely rugged, tried-and-tested absolute multiturn encoder with a resolution of up to 26 bits
- Mechanical interface: face mount, servo flange, blind hollow shaft and adapter accessories
- Zero set and preset functions via hardware/software

**Your benefits**

- Fewer variants are required since one freely programmable encoder offers all singleturn and multiturn resolutions
- Easy setup due to electrical connection adapters (1 to 2x PG, 1 to 2x M12)
- Less maintenance and a long service life reduce overall costs
- Application flexibility due to easily interchangeable collets for the blind hollow shaft

**LD-MRS** 3D LASER SCANNERS
**LMS5xx** 2D LASER SCANNERS

**LD-MRS – At a glance**
- Simultaneous measurements on up to 8 scanning planes
- Weatherproof thanks to the multi-echo technology and IP 69K enclosure rating.
- Lightweight, compact design: Approx. 1 kg
- Wide temperature range: -40° C to +70° C
- Low power consumption: 8 watts
- Supply voltage: 9 V DC to 27 V DC
- Different angular resolutions in the scanning range are available
- Integrated object tracking

**Your benefits**
- Simultaneous measurement on up to 8 planes compensates for vehicle pitch
- Easy sensor integration due to compact design
- Low operating costs due to low power consumption
- Fast data output, even when processing a high amount of information
- IP 69K-rated housing ensures accurate measurements in difficult environmental conditions
- Better detection by focusing on a defined scanning segment
- Data preprocessing allows tracking of up to 128 objects

For more information, just enter the link or scan the QR code and get direct access to technical data, CAD design models, operating instructions, software, application examples and much more.

**LMS5xx – At a glance**
- Powerful and efficient laser measurement sensor for ranges of up to 80 m
- Outstanding performance in adverse environmental conditions due to multi-echo technology
- Up to IP 67 enclosure rating, built-in heater for outdoor versions, highly compact design
- Low power consumption
- Fast signal processing
- Multiple I/Os
- Synchronization of multiple sensors possible

**Your benefits**
- Superior performance in a vast range of applications
- Smallest sensor with highest accuracy in its class
- Comprehensive range of lines and models to suit all performance and price requirements
- Fast, reliable object detection in nearly any weather conditions
- Low power consumption reduces total cost of ownership
- Best price/performance ratio in this sensor class on the market
- Fast, easy commissioning due to SOPAS software
- Self-monitoring functions increase system availability

For more information, just enter the link or scan the QR code and get direct access to technical data, CAD design models, operating instructions, software, application examples and much more.
**Bulkscan® LMS511 – At a glance**

- Non-contact measurement of volume and mass flow of bulk material
- Laser pulses with high angular resolution ensure outstanding image resolution
- 5-echo pulse evaluation produces highly reliable measurements
- Offers non-contact belt monitoring
- Integrated center-of-gravity calculator
- Robust structure for harsh ambient conditions
- Can also measure at low temperatures thanks to integrated heater
- Compact housing with IP67 enclosure rating

**Your benefits**

- Maximizes conveyor throughput
- Reduces maintenance costs by preventing belt slippage
- Increases the conveyor belt’s service life
- Reduces loading time
- Increases efficiency by optimizing belt capacity
- Simple installation
- Low maintenance costs
- Offers savings through minimized energy consumption

For more information, just enter the link or scan the QR code and get direct access to technical data, CAD design models, operating instructions, software, application examples and much more.
WE DELIVER “SENSOR INTELLIGENCE.”

SICK sensor solutions for industrial automation are the result of exceptional dedication and experience. From development all the way to service: The people at SICK are committed to investing all their expertise in providing with the very best sensors and system solutions possible.

A company with a culture of success

More than 8,000 people are on staff, with products and services available to help SICK sensor technology users increase their productivity and reduce their costs. Founded in 1946 and headquartered in Waldkirch, Germany, SICK is a global sensor specialist with more than 50 subsidiaries and agencies worldwide. The people work with pleasure at SICK.

This is demonstrated by the accolades that the company is regularly awarded in the “Great Place to Work” competition. This lively corporate culture holds strong appeal for qualified and skilled persons. In SICK, they are part of a company that ensures an excellent balance between career progression and quality of life.
Innovation for the leading edge

SICK sensor systems simplify and optimize processes and allow for sustainable production. SICK operates at many research and development centers all over the world. Co-designed with customers and universities, our innovative sensor products and solutions are made to give a decisive edge. With an impressive track record of innovation, we take the key parameters of modern production to new levels: reliable process control, safety of people and environmental protection.

A corporate culture for sustainable excellence

SICK is backed by a holistic, homogeneous corporate culture. We are an independent company. And our sensor technology is open to all system environments. The power of innovation has made SICK one of the technology and market leaders – sensor technology that is successful in the long term.
“SENSOR INTELLIGENCE.” FOR ALL REQUIREMENTS

SICK is a renowned expert in many industries, and is entirely familiar with the critical challenges they face. While speed, accuracy and availability take center stage in all industries, technical implementations vary greatly. SICK puts its vast experience to use to provide precisely the solution you need.

For applications worldwide

Hundreds of thousands of installations and applications go to prove that SICK knows the different industries and their processes inside out. This tradition of uncompromising expertise is ongoing: As we move into the future, we will continue to design, implement and optimize customized solutions in our application centers in Europe, Asia and North America. You can count on SICK as a reliable supplier and development partner.
For your specific industry

With a track record of proven expertise in a great variety of industries, SICK has taken quality and productivity to new heights. The automotive, pharmaceutical, electronics and solar industries are just a few examples of sectors that benefit from our know-how. In addition to increasing speed and improving traceability in warehouses and distribution centers, SICK solutions provide accident protection for automated guided vehicles. SICK system solutions for analysis and flow measurement of gases and liquids enable environmental protection and sustainability, for example, in energy production, cement production or waste incineration plants.

For performance across the board

SICK provides the right technology to respond to the tasks involved in industrial automation: measuring, detecting, monitoring and controlling, protecting, networking and integrating, identifying, positioning. Our development and industry experts continually create groundbreaking innovations to solve these tasks.

SERVICES FOR MACHINES AND SYSTEMS: SICK LifeTime Services

SICK LifeTime Services is a comprehensive set of high-quality services provided to support the entire life cycle of products and applications from plant walk-through to upgrades. These services increase the safety of people, boost the productivity of machines and serve as the basis for our customers’ sustainable business success. LifeTime Services range from product-independent consulting to traditional product services and are characterized by extensive industry expertise and 70 years of experience.
SICK LIFETIME SERVICES

Consulting and design
- Plant walk-through
- Risk assessment
- Safety concept
- Safety software and hardware design
- Validation of functional safety
- CE-conformance check

Product and system support
- Installation
- Commissioning
- Start-up support
- Calibrations
- Telephone support
- 24-hour helpline
- SICK Remote Service
- Troubleshooting on site
- Repairs
- Exchange units
- Extended warranty

Verification and optimization
- Inspection
- Stop time measurement
- Machine safety inspection
- Electrical equipment check
- Accident investigation
- Initial verification
- Performance check
- Maintenance

Upgrade and retrofits
- Upgrade services

Training and education
- Training
- Seminars
- Web training

VERSATILE PRODUCT RANGE FOR INDUSTRIAL AUTOMATION

From simple acquisition tasks to key sensor technology in a complex production process: With every product from its broad portfolio, SICK offers a sensor solution that best combines cost effectiveness and safety.

→ www.sick.com/products

Photoelectric sensors
- Miniature photoelectric sensors
- Small photoelectric sensors
- Compact photoelectric sensors
- Cylindrical photoelectric sensors
- Fiber-optic sensors and fibers
- MultiTask photoelectric sensors

Proximity sensors
- Inductive proximity sensors
- Capacitive proximity sensors
- Magnetic proximity sensors

Magnetic cylinder sensors
- Position sensors
- Sensors for T-slot cylinders
- Sensors for C-slot cylinders
- Sensor adapters for other cylinder types

Registration sensors
- Contrast sensors
- Markless sensors
- Color sensors
- Luminescence sensors
- Fork sensors
- Array sensors
- Register sensors
- Glare sensors
- Pattern sensors

Automation light grids
- Measuring automation light grids
- Switching automation light grids
PRODUCT OVERVIEW

Opto-electronic protective devices
- Safety laser scanners
- Safety light curtains
- Safety camera systems
- Multiple light beam safety devices
- Single-beam photoelectric safety switches
- Mirror columns and device columns
- Upgrade kits for opto-electronic protective devices

Safety switches
- Electro-mechanical safety switches
- Non-contact safety switches
- Safety locking devices
- Safety command devices

sens:Control – safe control solutions
- Safe sensor cascade
- Safety controllers
- Motion Control safety controllers
- Safety relays

Gas analyzers
- Gas transmitters
- In-situ gas analyzers
- Extractive gas analyzers

Dust measuring devices
- Scattered light dust measuring devices
- Transmittance dust measuring devices
- Gravimetric dust measuring devices

Analyzer solutions
- CEMS solutions
- Process solutions
- Control units
PRODUCT OVERVIEW

Traffic sensors
- Tunnel sensors
- Overheight detectors
- Visual range measuring devices

Ultrasonic gas flow measuring devices
- Volume flow measuring devices
- Mass flow measuring devices
- Flow velocity measuring devices
- Gas flow meters
- Flow computers

Identification solutions
- Image-based code readers
- Bar code scanners
- RFID
- Hand-held scanners

Vision
- 2D vision
- 3D vision

Distance sensors
- Displacement measurement sensors
- Mid range distance sensors
- Long range distance sensors
- Linear measurement sensors
- Ultrasonic sensors
- Optical data transmission
- Position finders

Detection and ranging solutions
- 2D LiDAR sensors
- 3D LiDAR sensors
- Radar sensors
**PRODUCT OVERVIEW**

**Motor feedback systems**
- Motor feedback system rotary
  - HIPERFACE®
- Motor feedback system rotary
  - HIPERFACE DSL®
- Motor feedback system rotary incremental
- Motor feedback system rotary incremental with commutation
- Motor feedback system linear
  - HIPERFACE®

**Encoders and inclination sensors**
- Absolute encoders
- Incremental encoders
- Linear encoders
- Wire draw encoders
- Safety encoders
- Inclination sensors
- Measuring wheel encoders

**Fluid sensors**
- Level sensors
- Pressure sensors
- Flow sensors
- Temperature sensors

**Integration products**
- Sensor Integration Machine
- 4Dpro connectivity

**System solutions**
- Customized analyzer systems
- Driver assistance systems
- Robot guidance systems
- Object detection systems
- Profiling systems
- Quality control systems
- Security systems
- Track and trace systems
- Functional safety systems

**Software products**
- SICK AppSpace
- Analytics Solutions
- Integrated Managing Solutions
EASY INTEGRATION INTO YOUR AUTOMATION WORLD

In the age of information easy, fast, and manageable access to information is becoming a strategic asset. Our intelligent sensor solutions and safety controllers provide different integration technologies that allow easy access – from HMI, PLC, and engineering tools – to data from our sensors. In this way, we support you towards solving your application rapidly and easily and increase machine availability with a continuous diagnostic concept.

PLC and engineering tool integration

OPC server
OPC technology is used to exchange data between field devices and Windows-based applications. The SOPAS OPC server from SICK follows the OPC DA specification and thus can be used on Windows operating systems.

Web server
The SOPAS web server from SICK can be used wherever there is a web browser available. The web server is distinguished by its ability to both carry out pure data exchange and also to provide visualizations for the devices, which is a big advantage, particularly for vision sensors.

HMI integration

Function blocks
The SICK function blocks allow you to quickly establish acyclic communication to our sensors within your PLC program. Additionally, complex and variable process data can be parsed into their individual information contents without programming effort.

DTM (Device Type Manager)
FDT/DTM is a cross-manufacturer concept with which configuration and diagnosis of devices from different manufacturers can be done with just one engineering tool.

TCI (Tool Calling Interface)
The Tool Calling Interface (TCI) makes it possible to call up a tool for carrying out parameterization and diagnosis of a field device via the existing communication infrastructure.

Fieldbus and network solutions

Our fieldbus and network solutions allow SICK sensors and safety controllers to be connected to all conventional automation systems. This guarantees an easy and fast access to the available data.

SERVICES FOR MACHINES AND PLANTS: SICK LifeTime Services

Our comprehensive and versatile LifeTime Services are the perfect addition to the comprehensive range of products from SICK. The services range from product-independent consulting to traditional product services.

- Consulting and design: Safe and professional
- Product and system support: Reliable, fast, and on-site
- Verification and optimization: Safe and regularly inspected
- Upgrade and retrofits: Easy, safe, and economical
- Training and education: Practical, focused, and professional

REGISTER AT WWW.SICK.COM TO TAKE ADVANTAGE OF OUR FOLLOWING SERVICES FOR YOU

- Access information on net prices and individual discounts.
- Easily order online and track your delivery.
- Check your history of all your orders and quotes.
- Create, save, and share as many wish lists as you want.
- Use the direct order to quickly order a big amount of products.
- Check the status of your orders and quotes and get information on status changes by e-mail.
- Save time by using past orders.
- Easily export orders and quotes, suited to your systems.
SICK AT A GLANCE

SICK is a leading manufacturer of intelligent sensors and sensor solutions for industrial applications. With more than 8,000 employees and over 50 subsidiaries and equity investments as well as numerous agencies worldwide, we are always close to our customers. A unique range of products and services creates the perfect basis for controlling processes securely and efficiently, protecting individuals from accidents and preventing damage to the environment.

We have extensive experience in various industries and understand their processes and requirements. With intelligent sensors, we can deliver exactly what our customers need. In application centers in Europe, Asia and North America, system solutions are tested and optimized in accordance with customer specifications. All this makes us a reliable supplier and development partner.

Comprehensive services round out our offering: SICK LifeTime Services provide support throughout the machine life cycle and ensure safety and productivity.

For us, that is “Sensor Intelligence.”

Worldwide presence:

Australia, Austria, Belgium, Brazil, Canada, Chile, China, Czech Republic, Denmark, Finland, France, Germany, Great Britain, Hungary, Hong Kong, India, Israel, Italy, Japan, Malaysia, Mexico, Netherlands, New Zealand, Norway, Poland, Romania, Russia, Singapore, Slovakia, Slovenia, South Africa, South Korea, Spain, Sweden, Switzerland, Taiwan, Thailand, Turkey, United Arab Emirates, USA, Vietnam.
