OPERATING INSTRUCTIONS

UE42-2HD

Safety relay for two-hand module

en

SICK AG • Erwin-Sick-Straße 1
D-79183 Waldkirch • www.sick.com
8015693/10DK/2018-08-02 • REIPA/XX
Printed in Germany (2018-08) • All rights reserved
Subject to change without notice

1 Scope

These operating instructions are only applicable to the UE42-2HD safety relays for two-hand module with the following entry on the type label in the field *Operating Instructions*: 8015693

You will find the device's date of manufacture on the type label in the field *Date Code* in the format yywwxx (yy = year, ww = calendar week, xxx = serial number). These operating instructions are original operating instructions.

2 On safety

This chapter deals with your own safety and the safety of the equipment operators.

➤ Please read this chapter carefully before working with the UE42-2HD or with the machine protected by the UE42-2HD.

2.1 Qualified safety personnel

The UE42-2HD safety relay must only be installed, commissioned and serviced by qualified safety personnel.

Qualified safety personnel are defined as persons who ...

- have undergone the appropriate technical training and
- have been instructed by the responsible machine operator in the operation of the machine and the current valid safety guidelines and
- have access to the operating instructions of the UE42-2HD safety relay and have read and familiarised themselves with them.

2.2 Applications of the device

The UE42-2HD safety relay can be used:

- in accordance with EN ISO 13849-1 up to PL e and category 4
- in accordance with EN 62 061 to SILCL3

The category achieved depends on the external circuit, the design of the wiring, the selection of the control switch and its placement on the machine.

The UE42-2HD safety relay has been evaluated to UL 508.

The related actuators on the machine or system can be safely shut down using the safety relay's output signal switching contacts.

The UE42-2HD safety relay is used only for volt-free safety sensors, e.g.:

- two-hand modules (EN 574, Typ III C)
- safety interlocks (EN 1088): dual-channel, e.g. safety doors

2.3 Correct use

The UE42-2HD safety relay must be used only as defined in section 2.2 "Applications of the device".

It must be used only by qualified safety personnel and only on the machine where it has been installed and initialised by qualified safety personnel in accordance with the operating instructions. If the device is used for any other purposes or modified in any way – also during mounting and installation – any warranty claim against SICK AG shall become void.

2.4 General safety notes and protective measures

Pay attention to the safety notes and protective measures!

Please observe the following items in order to ensure the correct use of the UE42-2HD safety relay.

- During the mounting, installation and usage of the safety relay, observe the standards and directives applicable in your country.
- The national/international rules and regulations apply to the installation, commissioning, use and periodic technical inspection of the safety relay, in particular:
 - Machinery Directive
 - Work Equipment Directive
 - EMC directive
 - the work safety regulations and safety rules
- Manufacturers and operators of the machine on which a safety relay is used are responsible for obtaining and observing all applicable safety regulations and rules.
- The tests must be carried out by qualified safety personnel or specially qualified and authorised personnel and must be recorded and documented to ensure that the tests can be reproduced and retraced at any time by third parties.
- The operating instructions must be made available to the operator of the machine where the UE42-2HD is used.
- The machine operator is to be instructed in the use of the device by qualified safety personnel and must be instructed to read the operating instructions.

3 Product description

3.1 Structure and operating principle of the device

The inputs on the UE42-2HD safety relay are prepared for the connection of the safety sensors listed in section 2.2 "Applications of the device". Two separate input circuits control the internal relays. The two enable current paths are designed as safe outputs. The signalling current path is a non-safety related output.

3.2 Device functions

The function of the two-hand module connected is monitored. The two actuating elements (pushbuttons with contact combinations) on the two-hand control panel are connected to the two input circuits on the UE42-2HD safety relay. If at least one actuating element is not operated, the enable current paths open and the signalling current path closes. External device monitoring is to be realised using an external circuit depending on the requirement (see section 5.2 "Operating modes").

Concurrence monitoring: The simultaneous actuation of the actuating elements is monitored. Only if both actuating elements change state within 0.5 s do the enable current paths close and the signalling current path opens (EN 574, type III C).

In order to attain SILCL3/PL e, connect the external device monitoring!

In order to reach SILCL3/PL e, an external diagnosis with DC ≥ 99 % must be applied (i.e. the external device monitoring must be connected).

Please also read the notes in chapter 13 "Application example".

Status indicators

Display	Meaning
SUPPLY ● Green	Supply voltage active
K1 ● Green	Channel 1 switched
K2 ● Green	Channel 2 switched

4 Mounting

Mounting only with enclosure rating IP54 or better!

The safety relay is only allowed to be mounted in the control cabinet. The control cabinet must at least comply with enclosure rating IP54.

➤ Mounting in accordance with EN 50 274.

➤ The modules are located in a 22.5 mm wide modular system for 35 mm mounting rails as per EN 60 715.

5 Electrical installation

5.1 Pin assignments

Terminal	Description
A1	Voltage supply (+24 V DC)
A2	Voltage supply (0 V DC)
Y1-Y2	External device monitoring on external switching elements
Y11	Control section 1 (input circuit 1)
Y12	Control section 1 (control voltage -)
Y14	Control section 1 (control voltage +)
Y21	Control section 2 (input circuit 2)
Y22	Control section 2 (control voltage +)
Y24	Control section 2 (control voltage -)
13-14	Enable current path 1
23-24	Enable current path 2
31-32	Signalling current path (not safe)

5.2 Operating modes

5.2.1 Two-channel operation with cross circuit detection

The volt-free switching elements of the two-hand module are to be connected between Y11, Y12 and Y14 and between Y21, Y22 and Y24. The N/C contacts of the two-hand module are to be connected to Y12 and Y22 as well as to the N/O contacts Y14 and Y24 (see Fig. 2).

5.2.2 External device monitoring

The N/C contacts of the actuators integrated provide the external device monitoring (EDM). These contacts are to be connected between Y1 and Y2.

6 Commissioning and regular tests

6.1 Commissioning requires a thorough check by qualified safety personnel!

Before you operate a system protected by the safety relay for the first time, make sure that the system is first checked and released by qualified safety personnel.

- Please read the notes in chapter 2 "On safety".
- Observe the relevant laws and national regulations.

6.2 Check the hazardous area!

- Ensure there is nobody in the hazardous area before commissioning.
- Secure the hazardous area against entry.

6.3 Regular inspection of the protective devices by qualified safety personnel

➤ Check the system following the inspection intervals specified in the national rules and regulations.

- Each safety application must be checked at an interval specified by you.
- The effectiveness of the protective devices must be checked daily by a specialist or by authorised personnel.
- If changes have been made to the machine or the protective device, or the safety relay has been changed or repaired, you must again thoroughly check the entire safety application.

7 Error messages of the SUPPLY LED

Display	Meaning
○	No supply voltage or undervoltage or cross circuit on A1/A2
● Green	No error, device ready for operation
● Green (2×)	Input signal error
● Green (3×)	External device monitoring (EDM) error
● Green (4×)	Oversupply
● Green (flashing quickly)	Internal error/serious error

8 In the event of faults or errors

8.1 Cease operation if the cause of the malfunction has not been clearly identified!

- Stop the machine if you cannot clearly identify or allocate the error and if you cannot safely rectify the malfunction.

8.2 Complete function test after rectification of fault!

- After rectifying a fault, perform a complete function test.

9 Disposal

 Always dispose of serviceable devices in compliance with local/national rules and regulations with respect to waste disposal.

10 Ordering information

Part	Part number (type code)
UE42-2HD for 24V DC with screw type terminals	6024878 (UE42-2HD2D2)
UE42-2HD for 24V DC with removable terminals	6024881 (UE42-2HD3D2)

11 Compliance with EU directives

UE42-2HD, Safety relays
SICK AG, Erwin-Sick-Straße 1, D-79183 Waldkirch

You can call up the EU declaration of conformity and the current operating instructions by entering the part number in the search field at www.sick.com (part number: see the type label entry in the "Ident. no." field).

Direct link to EU declaration of conformity:
www.sick.com/9069596

The undersigned, representing the manufacturer, hereby declares that the product is in conformity with the provisions of the following EU directive(s) (including all applicable amendments), and that the standards and/or technical specifications stated in the EU declaration of conformity have been used as a basis for this.

- MACHINERY DIRECTIVE 2006/42/EC
- EMC DIRECTIVE 2014/30/EU
- ROHS DIRECTIVE 2011/65/EU

Courant d'entrée	5 mA		20 mA
Temps de réarmement		150 ms	
Temps minimal de désenclenchement	250 ms		
Temps minimal de désenclenchement en cas de défaut		1 s	
Résistance des câbles, circuit d'entrée		70 Ω	
Circuits de sortie (13/14, 23/24, 31/32)			
Délai de retombée des relais (K1/K2)		50 ms	
Matériau de contact et état de surface	AgSnO ₂ , doré		
Contacts de commande (contact NO), organe de sécurité	2		
Contact de retour (NF), organe ordinaire	1		
Type de contact	Guidé		
Charge admissible par les contacts (cf. Fig. 3)			
Tension de commutation CA/CC	10 V		250 V
Courant de commutation	10 mA		6 A
Courant total I _{sum}		12 A	
Pour les applications UL 508 et CSA			
Tension de commutation CA (par contact)		230 V CA	
Courant de commutation CA		6 A	
Tension de commutation CC (charge ohmique)		24 V CC	
Courant de commutation CC		6 A	
Courant total I _{sum}		12 A	
Catégorie d'utilisation (EN 60 947-5-1)	CA-15 Ue 230 V CA, le 3 A (1200 cmmt/h)		
	CC-13 Ue 24 V CC, le 3 A (1200 cmmt/h)		
Protection des contacts gG		6 A	
Fréquence de commutation admissible	3600/h		

¹⁾ Le niveau Performance Level effectivement atteint dépend de l'application. Pour obtenir des informations détaillées sur la conception de sécurité de la machine/installation, prendre contact avec l'agence SICK la plus proche.

²⁾ Avec CC = 99 % et MTTF_D = 100 a (selon EN ISO 13 849-1, tab. K1 et formule C.7) et 8760 manœuvres/a.

	Minimum	Typique	Maximum
Courant de court-circuit assigné	500 A		
Durée de vie mécanique	10 ⁷ manœuvres		
Données opérationnelles			
Protection contre le contact (EN 60 664-1, EN 60 947-1)			
Tension impulsionnelle de mesure U _{imp}		4 kV	
Catégorie de surtension	II	300 V CA	
Tension de mesure		2 kV	
Tension d'essai U _{eff} 50 Hz			
Indice de protection			
Boîtier	IP40 (EN 60 529)		
Bornes	IP20 (EN 60 529)		
Montage		Rail de montage (EN 60 715)	
Température ambiante de fonctionnement	-25 °C		+55 °C
Température de stockage	-25 °C		+75 °C
Sections du conducteur			
Un conducteur (1×)	0,14 mm ²		2,5 mm ²
Un conducteur (2×, section identique)	0,14 mm ²		0,75 mm ²
Conducteurs toronnés avec manchons (1×)	0,25 mm ²		2,5 mm ²
Conducteurs toronnés avec manchons (2×, section identique)	0,2 mm ²		0,5 mm ²
Couple de serrage admissible		0,5 Nm	0,6 Nm
Pour les applications UL 508 et CSA			
Section des fils de raccordement		AWG 26-14 (utiliser uniquement des conducteurs multibrins résistants à 60/75 °C)	
Couple de serrage	5-7 lb-in		
Poids	200 g

15 Dati tecnici

15.1 Scheda tecnica

	Minimo	Tipico	Massimo
--	--------	--------	---------

Dati generali del sistema

Limite SIL dichiarato ¹⁾	SILCL3 (EN 62 061)
Safe failure fraction (SFF)	90 % (EN 62 061)
Tolleranza di guasto hardware (HFT)	1 (EN 62 061)
Categoria	Categoria 4 (EN ISO 13 849-1)
Performance Level ¹⁾	PL e (EN ISO 13 849-1)
Valore B_{100} (relè)	
ca-15, 230 V, I = 1,5 A	$2,5 \times 10^6$ cicli di comando
I = 0,75 A	6×10^6 cicli di comando
cc-13, 24 V, I = 2,5 A	2×10^6 cicli di comando
I = 0,6 A	10×10^6 cicli di comando
PFH _h (probabilità media di un malfunzionamento pericoloso all'ora) ²⁾	3×10^{-8}
T _M (durata di utilizzo)	20 anni (EN ISO 13 849-1)
Categoria di arresto	0 (EN 62 061)

Tensione di alimentazione/ circuito di ingresso (A1, A2)

Tensione d'ingresso (A1, A2), cc	19,2 V	24 V	30 V
Absorbimento	1 W		
Ondulazione residua con funzionamento cc (entro i limiti di U ₀)			2,4 V _{SS}

Circuito di comando

Tensione di uscita (Y12, Y24)	0 V		
Tensione di uscita (Y11, Y21, Y1)	U _{A1} -2 V		U _{A1}
Circuiti di ingresso (Y11, Y21)			
Tensione d'ingresso (LOW)	0 V		
Tensione d'ingresso (HIGH)	17,2 V		
Corrente d'ingresso	20 mA		45 mA
Circuiti di ingresso (Y2)			
Corrente d'ingresso	5 mA		20 mA
Tempo di ripristino			150 ms
Tempo minimo di spegnimento	250 ms		
Tempo minimo di spegnimento nel caso di errore			1 s
Resistenza del cavo dei circuiti di ingresso			70 Ω

Percorsi corrente di uscita (13/14, 23/24, 31/32)

Tempo di ritardo di ricaduta (K1/K2)			50 ms
Materiale dei contatti e superficie	AgSnO ₂ , dorata		
Percorsi elettrici di abilitazione (contatto in chiusura), importante per la sicurezza	2		
Percorsi elettrici di segnalazione di ritorno (contatto in apertura), non attinenti alla sicurezza	1		
Tipo di contatti	A guida positiva		
Carico limite dei contatti (vedere Fig. 3)			
Tensione di commutazione ca/cc	10 V		250 V
Corrente di commutazione	10 mA		6 A
Corrente totale I _{sum}			12 A
Per applicazioni UL 508 e CSA			
Tensione di commutazione ca (per contatto)			230 V ca
Corrente di commutazione ca			6 A
Tensione di commutazione cc (carico resistivo)			24 V cc
Corrente di commutazione cc			6 A
Corrente totale I _{sum}			12 A
Categoria di utilizzo (EN 60 947-5-1)	ca-15 Ue 230 V ca, le 3 A (1200 cicli/h)		
	cc-13 Ue 24 V cc, le 3 A (1200 cicli/h)		
Protezione dei contatti gG			6 A

¹⁾ Il performance level raggiunto realmente dipende dall'applicazione. Per informazioni più dettagliate sull'impostazione di sicurezza della vostra macchina, o del vostro impianto, preghiamo di contattare la vostra sede SICK di riferimento.

²⁾ Con cc = 99 % e MTTF₀ = 100 a (conformemente alla EN ISO 13 849-1, tab. K1 e formula C.7) e 8760 cicli di comando all'anno.

	Minimo	Tipico	Massimo
--	--------	--------	---------

Frequenza di commutazione consentita	3600/h
Corrente di corto circuito condizionata	500 A
Vita tecnica meccanica	10 ⁷ cicli di comando
Dati di esercizio	
Protezione contro le scariche elettriche (EN 60 664-1, EN 60 947-1)	
Tensione impulsiva di test U _{imp}	4 kV
CATEGORIA di sovratensione	II
Tensione nominale	300 V ca
Tensione di prova U _{eff} 50 Hz	2 kV
Grado di protezione	
Involucro	IP40 (EN 60 529)
Morsetti	IP20 (EN 60 529)
Montaggio	Guida omega (EN 60 715)
Temperatura di funzionamento	-25 °C
Temperatura di immagazzinamento	+55 °C
Sezioni dei conduttori	
Monofilo (1×)	0,14 mm ²
Monofilo (2×, sezione uguale)	0,14 mm ²
Filofine con codoli finali (1×)	0,25 mm ²
Filofine con codoli finali (2×, sezione uguale)	0,2 mm ²
Momento di serraggio consentito	0,5 Nm
Per applicazioni UL 508 e CSA	AWG 26-14 (impiegare solo cavi in rame 60/75 °C)
Sezione del collegamento	5-7 lb-in
Momento di serraggio	200 g
