LiDAR-LOC
Modular LIDAR localization based on natural contours
Product description
The LiDAR-LOC is a localization solution for all autonomously moving mobile platforms. It uses LiDAR sensor data and links it with information from other sensors as needed. This is how the LiDAR-LOC achieves accurate and reliable localization results based on natural contours – environmental adjustments are not necessary. Integrating the solution into an existing infrastructure and putting it into operation is easy.

The LiDAR-LOC is available as a modular software solution that runs on SICK AppSpace-certified as well as various third-party controllers. This means the LiDAR-LOC is the optimal starting point for the development of vehicle navigation.

At a glance
- High repeatability: < 10 mm
- Driving speed up to 3 m/s
- Rot. rate max. 45°/s
- Position output with up to 33 Hz
- Easy-to-operate user interface (web browser) and ROS integration
- Integration options for vehicle odometry and reflector detection

Your benefits
- Scalable localization solution – suitable for the respective application
- High positioning accuracy & repeatability
- Additional sensor signals can be integrated for individual applications
- No changes to the infrastructure with additional artificial landmarks required
- Support of safety and standard LiDAR sensors for a wide range of solution concepts
- Simple integration of new functions thanks to modular structure
- Reliable localization in environments with high dynamics or few contours

Fields of application
- Position determination for all types of mobile platforms, industrial automated guided vehicles (AGVs), service robots and automated guided vehicle systems

SICK AT A GLANCE

SICK is one of the leading manufacturers of intelligent sensors and sensor solutions for industrial applications. A unique range of products and services creates the perfect basis for controlling processes securely and efficiently, protecting individuals from accidents and preventing damage to the environment.

We have extensive experience in a wide range of industries and understand their processes and requirements. With intelligent sensors, we can deliver exactly what our customers need. In application centers in Europe, Asia and North America, system solutions are tested and optimized in accordance with customer specifications. All this makes us a reliable supplier and development partner.

Comprehensive services complete our offering: SICK LifeTime Services provide support throughout the machine life cycle and ensure safety and productivity.

For us, that is “Sensor Intelligence.”
